

IN THE SPECIFICATION

Please replace the paragraph beginning at page 5, line 11 with the following rewritten paragraph:

A¹ The imaging service 100 includes a client 110 and a server 120. A digital input device ~~150~~130 is connected to the client 110. A computer user loads captured images 150 into the client 110 using the digital input device 130. In one embodiment, the digital input device 130 is a digital camera. The computer captures the captured images 150 with a digital camera, which stores the captured images 150 in digital form so that they can be loaded directly into the client 110. In another embodiment, the digital input device 130 is a scanner. The computer user captures the captured images 150 with a conventional camera and uses the scanner to load the captured images 150 into the client 110. The captured images 150 are saved in an appropriate file format, such as a Joint Photographic Experts Group (JPEG) file, a Graphics Interchange Format (GIF) file, or a Portable Network Graphics (PNG) file. The operation of digital cameras and scanners, as well as the various file formats for saving pictures in a computer, are well known to those of skill in the art.

Please replace the paragraph beginning at page 7, line 6 with the following rewritten paragraph:

A² One embodiment of a server 120 is illustrated in FIG. 3. The server 120 includes a processor ~~300~~310, memory ~~310~~320, and input/output devices ~~320~~330. The processor ~~300~~310, memory ~~310~~320, and input/output devices ~~320~~330 are connected through a bus ~~330~~340. The memory ~~310~~320 is configured to store instructions which, when executed by the processor ~~300~~310, perform the method described herein. The memory ~~310~~320 may also store the captured image and database images used in the method described herein. Input/output devices ~~320~~330

A2 may include a keyboard, a mouse or other pointing device, a digital camera, a scanner, a disk drive, a monitor, and a printer.

Please replace the paragraph beginning at ~~page 7, line 18~~ with the following rewritten paragraph:

A3
Next, the particular methods of the invention are described in terms of computer software with reference to a flowchart illustrated in FIG. 4. The methods to be performed by the computer constitute computer programs made up of computer-executable instructions. Describing the methods by reference to a flowchart enables one skilled in the art to develop programs including instructions to carry out the methods on a suitable computer (the processor of the computer executing the instructions from computer-readable media). If written in a programming language conforming to a recognized standard, such instructions can be executed on a variety of hardware platforms and for interface to a variety of operating systems. In addition, the present invention is not described with reference to any particular programming language. It will be appreciated that a variety of programming languages may be used to implement the teachings of the invention as described herein. Furthermore, it is common in the art to speak of software, in one form or another (e.g., program, procedure, process, application, module, logic...), as taking an action or causing a result. Such expressions are merely a shorthand way of saying that execution of the software by a computer causes the processor of the computer to perform an action or a-produce a result.

Please replace the paragraph beginning at ~~page 10, line 7~~ with the following rewritten paragraph:

A4
In one embodiment, the imaging service can modify the presentation images to be consistent in size, color, exposure, and other attributes 421. The modification may be necessary to create a visually attractive and uniform presentation, especially if the visual presentation

A4
includes both captured images and database images. The imaging service modifies the images using image-smoothing technology to create seamless transitions between the presentation images as they are displayed in the visual presentation 423. The server combines the presentation images in a visual presentation 425. Finally, the online service then sends the visual presentation to the client 429427.

Please replace the paragraph beginning at ~~page 11, line 1~~ with the following rewritten paragraph:

A5
The particular methods performed by a server system of an embodiment of the invention have been described. The method performed by the server has been shown by reference to a flowchart illustrated in FIG. 4, including all the acts from 401 until 429427. ~~Additionally, a method performed by a server in an alternative embodiment of the invention has been shown by reference to a flowchart illustrated in FIG. 5, including all the acts from 401 to 429.~~
